Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Discussed request for information and applicant agreed to submit the EP search report and would point to any features of the IDS references that might relate to the claimed features. Discussed applicant's invention and prior art. Applicant submitted three proposed amendments to claim 1 to distinguish from Squibbs. The changes in version 1 emphasize the use of the geographic database to identify photographs in proximity to a specified location. Applicant argues that Squibbs uses only latitude/longitude data to identify photos and therefore doesn't require a geographic database. In version 2, the user provides a physical location, which is transformed into an alternative format, while version 3 requires geocoding of the location information. Applicant points out that Squibbs doesn't transform the location into any alternative format and doesn't geocode the location information. Examiners agreed that they had a better understanding of the invention, and would consider the amended claim language with respect to the prior art.
